

**Strawberry Hyb. Albion plugs:** Grow your strawberries quickly and easily with this large strawberry plant plug. Use in the garden, in a bag on the balcony, a hanging basket or patio container.

**Plug**

**Flowers  
5-6 weeks  
after plantation**

**Fruits  
5-6 weeks  
after flowering**

**Container**

Height ***	Spreading ***	Exposure ****	Harvest ****	Hardiness zone ***
25-30 cm	30 cm - garden 15 cm - container	Sun	June - September	3

**Type** Ever bearing variety, compact and vigorous. Producing cascades of flowers with few runners.

**Appearance** White flower with a yellow center, green foliage and medium sized dark red fruits.

**Plant cultivation** Plant plugs as soon as received since the plant is in its growth period. If you cannot plant quickly, keep plugs at a temperature of 5°C. To ensure a harvest of beautiful and large fruits, it is important for the plant to not miss any water during flowering period.

**Plantation**

**Container or hanging basket** Use a 25 cm (depth) container with holes in the bottom. To ensure a good drainage, drop 3 cm of gravel in the bottom. Plant the plugs in a mixture of equal parts of ground garden and compost.

**Open ground** Aerate soil by spading bed area, removing roots, stones and weeds. Incorporate an organic manure to enrich the soil; if the soil is calcareous, add peat (strawberries prefer acid soils). Mulching is recommended to prevent the strawberries from resting on the ground and possibly rot.

**Watering** Strawberries are water-greedy and require regular watering, especially in hot weather, but beware of excessive watering. In summer, it is recommended to water in the evening or early in the morning avoiding quick evaporation under the sun.

**Winter protection** Protect with a good layer of dried leaves, straw or mulch. In spring, clear plants of protection and allow them space to grow.
